FLOOR SLAB SUPPORT SYSTEM

HELICAL WALL TIE-BACK

At K.C. Waterproofing and Ram Jack Foundation Systems, we use state-of-the-art patented technology to repair damaged foundations and associated structural damage caused in homes built with basements, crawl spaces or on concrete slabs. We also offer a complete array of waterproofing and water control products and services to address water intrusion issues that often occur when a home's foundation is compromised.

Some common signs of foundation distress:

EXTERIOR

- Diagonal (stair-stepping) cracks in brick walls;
Cracks may go through brick or mortar
- Cracks in the foundation walls
- Bowed or non-vertical walls
- Separation of wood trim joints at corners
- Separation of concrete driveway, patio or sidewalk from foundation
- Tilting of landscaping or retaining walls

INTERIOR

- Cracks seeping or leaking
- Musty smell
- Cracks in sheetrock walls or ceilings
- Bottom of walls separating from floors
- Cracks at wall corners, above doors or by windows
- Sticking doors or windows/warped frames
- Sloping floor surface or cracks in vinyl/ceramic tile
